 **ST. MARY'S**
Advanced Care Hospital
Healing BODY, MIND and SPIRIT.

Advanced Outpatient Surgery is appropriate for any number of procedures, including colonoscopies, pain injections, orthopedic procedures, ear, nose and throat cases, plastic surgery, gynecological, ophthalmologic, as well as urological and those dental procedures requiring general anesthesia.

We're Redefining the Concept of Surgery

There was a time when “surgery” meant an extended hospital stay, lots of expense and an upheaval to your life and those of your family.

Times have changed. More and more, physicians are recommending outpatient surgery when it is appropriate. It's less expensive. You are on your way home much sooner.

St. Mary's Surgicare is the ideal facility for outpatient surgery, not only because we have a team of highly trained and skilled surgical professionals, but also because every one of our staff members is mindful of the St. Mary's promise to heal body, mind and spirit. That promise is particularly important when our patients are children. Parents

can stay with their children right up to the time of surgery and meet them in recovery. Security blankets and a favorite teddy bear are always welcome, too.

In our two locations, St. Mary's Surgicare performs more than 11,000 procedures each year in nine operating rooms and four procedure rooms. You may only be with us for a short time, but while you are here, we'll treat you like you are our NUMBER ONE patient.
